

# Policy handbook for nature-based solutions

**The A-DVICE policy handbook will provide advice for policy development to implement, mainstream and upscale nature-based solutions (NBS) in the Nordics.**

The Nordic programme on nature-based solutions (NBS) has contributed to knowledge about the status of the NBS concept and its adoption in the Nordic countries. While there are many good examples, the studies have also uncovered gaps and challenges related to the mainstreaming of NBS across sectors and governance levels.

The A-DVICE project (2023-2024) will build on the Nordic NBS programme results to provide a user-friendly, digital handbook for NBS policy development.

The handbook can serve as both an inspiration and a source of practical tips and insights. The advice will be searchable and categorized according to different societal challenges, governance levels and policy types.

It is meant for policy makers and decision makers at the local, regional, or national levels in the Nordic region. The handbook may also be useful to anyone who is interested in learning more about policies supporting NBS.
